

Senior Wellness

We want our beloved pets to be with us as long as possible. That is why preventive care is so important. It is the key to a long and happy life.

Senior Wellness Profiles allow us to detect problems early when they are easiest to treat (and less expensive).

Detecting early changes in your pet's health means less discomfort and suffering and can extend the life of your pet by treating abnormalities early on.

Often pets are seen at the vet when a condition is already too advanced for treatment to be very effective. Because pets don't usually show their pain and discomfort, they are often suffering for some time before their owners bring them to the vet.
