

The Senior Profile

**SEPTEMBER THROUGH NOVEMBER
15% OFF SENIOR PROFILES**

Physical Exam: The Veterinarian does a complete physical exam on your pet. They can check for external and internal problems or concerns including cancer, heart and lung disease, dental disease, cataracts, arthritis, and many others.

Complete Blood Count: This blood test helps identify infections, anemia, certain types of cancer, and immune disorders.

Chemistry Profile: This blood test can detect changes in the liver, kidneys, and other organ systems. It can also detect endocrine disorders such as diabetes, pancreatitis, and other diseases/disorders.

Thyroid function: This blood test helps identify thyroid abnormalities.

Complete Urinalysis: A urinalysis can help detect kidney disease, diabetes, urinary tract infections, bladder stones, tumors, and inflammation in the bladder.

Chest Radiographs: Radiographs can help diagnose heart and lung disease, as well as detecting cancerous growths.

Blood Pressure: This test can help detect heart disease and hypertension.

***By diagnosing and treating problems early, we may be able to slow down the disease process and prevent pain and discomfort. We can also increase your pet's lifespan and overall quality of life.**
